AB - J60040061 The catheter is made of an organic high polymer elastomer
matrix contg. a hardly water-soluble acridine cpd. or its salt
dispersed therein.

- USE/ADVANTAGE - Due to the incorporation of the hardly water-soluble
acridine cpd. or its salt as an antibacterial substance into the
organic high polymer elastomer matrix, zero-order release of the
antibacterial substance is possible in actual use of the catheter. The
catheter, when used, may gradually release the antibacterial acridine
cpd. at a regular speed.

IW - URETHRA CATHETER GRADUAL RELEASE ANTIBACTERIAL COMPOUND MADE
ORGANIC

HIGH POLYMER ELASTOMER MATRIX CONTAIN HARDLY WATER SOLUBLE ACRIDINE
COMPOUND

IKW - URETHRA CATHETER GRADUAL RELEASE ANTIBACTERIAL COMPOUND MADE
